Rocket Uniface Library 10.4

$rtrim

Trim a string on the right-hand side, following a pattern.

`$rtrim` (*Source* , *Pattern*)

Example: vOutput = $rtrim("Unifacexxxx","x")

Parameters

Table: Parameters

Parameter	Data Type	Description
Source	String	String to be trimmed on the right-hand side.
Pattern	String	Pattern to remove. It can be a constant string, regex string, or syntax string. For more information, see Syntax Strings for Pattern Matching and Regex Strings for Pattern Matching.

Return Values

Trimmed string.

Use

Allowed in all component types.

Description

The `$rtrim` function is used to right trim a string following a pattern.

Example: Using `$rtrim`

```
vInput="UNIFACExxxx"
vOutput = $rtrim(vInput,"x")
; vOutput now contains "UNIFACE"
```

```
vString = $rtrim("xxxxUnifacexxxx",$regex("x"))
; vString now is "xxxxUniface"
vString = $rtrim("xxxx",$regex("x"))
; vString now is ""
vString = $rtrim("uniface1111234567890111",$regex("\d"))
; vString now is "uniface"
```
